

PROGRAMMING HAVERLAND RC12B

-Once it is connected and installed, the screen should light up waiting for us to configure the current time. If the screen is off, press the ON/STANDBY button.

- Press the FUNCTIONS button until you see a clock drawing displayed. Then press the ON/STANDBY and FUNCTIONS buttons at the same time during 3 seconds. The time will begin to flash.

-Press the + or – buttons to program the current hour. Press the FUNCTION button to confirm. You have to configure the minutes the same way. Press the FUNCTION button to confirm.

-Next we will configure the current day, each day of the week is indicated with a number on the right hand side of the screen, the dot has to be placed on the correspondent day of the week, using the + or - buttons.

-After that we begin to configure the programming for each hour and each day of the week.

-We begin with the first hour for the first day of the week.

-Using the + or – buttons, we will indicate the comfort hour with the “+”, and the economy with the “-“.
